Humpback whale - Wikipedia The humpback whale (*Megaptera novaeangliae*) is a species of baleen whale. One of the larger rorqual species, adults range in length from 12â€“16 m (39â€“52 ft) and weigh around 25â€“30 metric tons (28â€“33 short tons. Humpback Whale Facts Humpback Whale Facts The humpback whale is a large marine mammal that belongs to one of over 80 known species of cetacea. These marine mammals are usually identified by their enormous size, majestic whale songs and their aerial acrobatic abilities such as their ability to continuously breach the water in spite of their large bodies. Humpback Whale | National Geographic Humpback whales are known for their magical songs, which travel for great distances through the world's oceans. Whale Songs These sequences of moans, howls, cries, and other noises are quite complex and often continue for hours on end.

HUMPBACK WHALE - enchantedlearning.com The humpback whale is a baleen whale and a rorqual whale that sings amazing songs. It performs complex and cooperative feeding techniques. The humpback has a bulky head with bumpy protuberances (tubercles), each with a bristle. Humpback whale | mammal | Britannica.com Humpback whale, (*Megaptera novaeangliae*), a baleen whale known for its elaborate courtship songs and displays. Humpbacks usually range from 12 to 16 metres (39 to 52 feet) in length and weigh approximately 36 metric tons (40 short [U.S.] tons. Facts About Humpback Whales - Live Science Humpback whales are not the biggest whales â€” that's the blue whale. Humpbacks can grow to 60 feet (18 meters) long, and they can weigh a whopping 40 tons (about half the size of a blue whale), according to the NOAA. Their flippers can grow up to 16 feet (5 m) long, which is the largest appendage in the world.

Humpback Whale | NOAA Fisheries The humpback whale takes its common name from the distinctive hump on its back. Its long pectoral fins inspired its scientific name, *Megaptera*, which means â€œbig-winged.â€• Humpback whales are a favorite of whale watchersâ€•they are often surface active, jumping out of the water and slapping the surface with their pectoral fins or tails. Humpback Whale Species Guide - us.whales.org The humpback whale is renowned for being one of the most energetic of the large whales with its spectacular breaching, lobtailing and flipper-slapping. Its scientific name *Megaptera novaeangliae* means 'big winged New Englander' because of its long flippers that look like wings when it breaches and because it was first described in New England. Video: A humpback whale was spotted breaching in Boston ... There's a humpback whale in Boston Harbor! With recreational boats & shipping vessels, Head Naturalist Laura Howes is hopeful that it will return to safer waters soon. Its location has been reported to both the @uscoastguard & the @NEAQ rescue team.
