What is a hurricane? - NOAA's National Ocean Service "Hurricane Season" begins on June 1 and ends on November 30, although hurricanes can, and have, occurred outside of this time frame. NOAA's National Hurricane Center predicts and tracks these massive storm systems, which occur, on average, 12 times a year in the Atlantic basin. What Are Hurricanes? | NASA Hurricanes are large, swirling storms that form over warm ocean waters. Hurricane Lane to Make Landfallâ€“Learn More About Hurricanes Today "hurricane" is one of three names for a rotating tropical storm with winds of at least 74 miles (119 kilometers) an hour. These storms are called hurricanes when they develop over the Atlantic or eastern Pacific Oceans.

Hurricane Season 2018: How Long It Lasts and What to Expect On July 6, the Atlantic's first hurricane of the season whipped into shape, transforming from a tropical depression to a full-strength Category 1 hurricane in a mere 24 hours. Called Beryl, the hurricane was packing sustained winds of 80 mph (130 km/h) as of 5 p.m. ET on July 6, with higher gusts, according to NOAA. Hurricane Preparedness | Hurricane Safety | Red Cross Learn more about how to clean up after a hurricane, including the supplies youâ€™ll need, how to deal with contaminated food and water, and how to repair water damage. Donâ€™t just repair your home, build in hurricane-resistant features to help protect against future storms: Secure double entry doors at the top and bottom. Hurricanes | Ready.gov The Atlantic hurricane season runs from June 1 to November 30. The Pacific hurricane season runs May 15 to November 30. Hurricanes: Can happen along any U.S. coast or in any territory in the Atlantic or Pacific oceans. Can affect areas more than 100 miles inland. Are most active in September.

Hurricane 2018 - AccuWeather.com AccuWeather.com's Hurricane Center offers everything you need for tracking hurricane season 2018. Download tracking maps, research hurricane facts, and keep up with the latest watches and warnings. Hurricane Safety Tips and Resources - weather.gov The primary hazards from tropical cyclones (which include tropical depressions, tropical storms, and hurricanes) are storm surge flooding, inland flooding from heavy rains, destructive winds, tornadoes, and high surf and rip currents. Storm surge is the abnormal rise of water generated by a storm's winds. Tropical cyclone - Wikipedia Hurricane Maria is the third most destructive tropical cyclone in U.S history, with damage totaling \$91.61 billion (2017 USD), and with damage costs at \$68.7 billion (2012 USD), Hurricane Sandy is the fourth most destructive tropical cyclone in U.S history.

Saffir-Simpson Hurricane Wind Scale The Saffir-Simpson Hurricane Wind Scale is a 1 to 5 rating based on a hurricane's sustained wind speed. This scale estimates potential property damage. Hurricanes reaching Category 3 and higher are considered major hurricanes because of their potential for significant loss of life and damage.
